How to make sure you have 64 bit Java installed

Got to Apps & Features and check that

- a. There is only one copy of Java installed
- b. That is says 64-bit

Settings		
Home Find a setting	Apps & features	э.20 імір 9/01/2019
Apps	ITunes Apple Inc.	396 MB 23/09/2019
E Apps & features	Java 8 Update 202 (64-bit) Oracle Corporation	120 MB 26/01/2019
⊟ Default apps	8.0.2020.8	
띠 <u></u> Offline maps		Modify Uninstall

If there is more than one version uninstall completely all the versions so that you are only left with one 64 bit version.

If there is no 64 bit version, go to this address

https://www.oracle.com/technetwork/java/javase/downloads/jre8-downloads-2133155.html

and make sure you download the **Window x64** file with the .exe extension.

Settings		
Home Find a setting	Apps & features	5.20 IVID 9/01/2019
Apps	Apple Inc.	396 MB 23/09/2019
E Apps & features	Java 8 Update 202 (64-bit) Oracle Corporation	120 MB 26/01/2019
≣r Default apps	8.0.2020.8	
띠 <u>:</u> Offline maps	Modify	Uninstall

Then uninstall all other versions of Java completely through Apps & Feature

Then run **jre-8u{XXX}-windows-x64.exe** (where {XXX} is the current version of Java, e.g. 251) that you downloaded to reinstall Java 64 bit.

You should now have removed the 32 bit version and installed the 64 bit version.
